

FOR IMMEDIATE RELEASE

Envia to Showcase AI-Powered Family Management Beta at Web Summit Vancouver, BC 2025

Platform leverages artificial intelligence to streamline family schedules and reduce parental stress, being unveiled at Web Summit Vancouver, BC

Vancouver, BC – May 26, 2025 – Envia, a technology company focused on simplifying family life, today announced it will showcase the beta version of its new AI-powered platform at Web Summit Vancouver, BC 2025. The platform aims to solve the problem of fragmented family schedules by intelligently automating scheduling workflows and consolidating information from various digital channels into one accessible place. This new platform will be showcased at Web Summit Vancouver, BC 2025 to highlight its innovative approach to addressing a common pain point for modern families.

Modern families face the challenge of managing children's activities and commitments, with information often scattered across multiple digital channels, leading to increased parental stress and potential scheduling conflicts. Envia addresses this by automatically pulling in and organizing event details from sources like emails, text messages, and school portals, providing a unified and predictive view of the family's schedule. This automation saves parents time and reduces the mental load associated with coordinating busy family lives.

The Envia platform offers several key benefits to families:

- Saves valuable time by automating calendar input.
- Reduces the mental burden on caregivers.
- Minimizes the risk of missing important events.
- Helps families arrive prepared and on time.
- Enhances coordination among caregivers.
- Learns over time to anticipate future needs.

"We understand the daily complexities that families face in staying organized," said Engilla Loo, CEO. "Our goal with Envia is to provide a smart, intuitive solution that takes the burden of schedule management off parents' shoulders, allowing them to

focus on what truly matters. We are excited to introduce Envia at Web Summit Vancouver, BC, a global stage that recognizes innovation."

Envia employs smart integrations to connect with existing communication channels, automatically extracting relevant event details. Its predictive AI capabilities learn family routines to offer helpful suggestions and reminders. Furthermore, the platform facilitates expanded sharing, allowing seamless coordination with extended family and trusted individuals.

Envia operates on a business-to-consumer (B2C) subscription model with a free two-week trial, followed by a monthly fee of \$10 per family. The application is supported on Android/iOS. The company is also developing a business-to-business-to-consumer (B2B2C) enterprise plan for larger organizations.

About Envia:

Founded in 2024 in Vancouver, BC, Envia is dedicated to creating innovative technology solutions that simplify the lives of modern families. Recognizing the increasing demands on parents' time and energy, Envia leverages the power of artificial intelligence to streamline organization and communication, fostering a more connected and less stressful family environment. ###
