Phi Wallet Takes the Global Stage at Web Summit Vancouver, Guiding the New Era of Gold Ownership in Canada

Vancouver, Canada – May 9, 2025

Phi Wallet, a fast-growing European fintech reshaping how individuals interact with physical gold, is proud to join Web Summit Vancouver 2025. Visitors at booth E259, will experience firsthand how <u>Phi Wallet</u> empowers people to turn gold into a tool for personal freedom, designed for those who want to build, protect, and truly own their financial future.

After successful launches across the Middle East, Latin America, and its native Europe, Phi Wallet now brings its mission to Canada, a country known for its appetite for responsible innovation and a population seeking more control over their wealth. This expansion follows Phi Wallet's recent acquisition of a Canadian Money Services Business (MSB) license, enabling the platform to provide instant liquidation of gold savings via card payments, money transfers, and real-time gold-backed solutions.

"Gold has always symbolized strength and stability, but it hasn't always been accessible or usable in everyday life. Phi Wallet changes that. We're building a future where real gold can power everyday financial freedom, secure, practical, and truly yours."

Eslam Anbar, CEO of Phi Wallet

With 100% physical LBMA-certified gold held in secure, state-of-the-art vaults, Phi Wallet ensures full Sharia compliance through tokenized gold ownership. Built on blockchain as its backbone, the platform is transparent, verifiable, and accessible anytime, anywhere.

As inflation continues to erode purchasing power and trust in traditional banking systems fluctuates, Canadians are seeking alternatives that are both stable and flexible. Phi Wallet provides just that: a modern platform offering real-world gold ownership, instant liquidity, and global usability, helping users secure their wealth and participate in a future of true financial independence.
