
Press Release

At Web Summit Vancouver 2025, Scrubs Co-Pilot Launches V2 on Ontario Medical Marketplace as Verified AI Scribe

Toronto, ON / Vancouver, BC — May 2025 — Today at **Web Summit Vancouver 2025**, Canadian healthtech startup **Scrubs Co-Pilot** is proud to announce the launch of **Version 2** of its AI-powered medical scribe. Now officially listed on the **Ontario Medical Marketplace** as a **verified vendor**, Scrubs Co-Pilot is poised to transform clinical documentation across Canada with a platform purpose-built for accuracy, auditability, and clinician ease-of-use.

After a rigorous review process, Ontario Medical has selected Scrubs Co-Pilot to support onboarding across its network — a significant endorsement of the platform’s compliance, performance, and reliability in real-world medical workflows.

*“Scrubs Co-Pilot was designed to restore trust and efficiency in the documentation process,” said **Vaibhav Malhotra**, Co-Founder of Scrubs Co-Pilot. “We’ve abstracted away the AI complexity so clinicians can simply hit ‘record’ and receive complete, structured notes — audit-ready, bias-tested, and traceable to the source.”*

Next-Gen Scribe, One Click Away

With just a single click, clinicians can begin recording and receive fully structured documentation — including SOAP and other note formats — linked directly to audio and transcript timestamps. This ensures **every note is grounded in the actual conversation**, eliminating hallucinations and supporting full traceability.

Users don’t need to craft prompts or manage templates. Scrubs Co-Pilot is powered by **expert-designed medical prompting**, optimized in collaboration with domain professionals — making it **as simple as recording and reviewing**.

Built Responsibly: No Live Training, No Black Box

Unlike other AI scribes that learn from live patient encounters — raising concerns over safety and transparency — Scrubs Co-Pilot was trained **exclusively on peer-reviewed medical journals and evidence-based guidelines**. This design guarantees that clinical knowledge is accurate, explainable, and **not shaped by uncontrolled data loops**.

Bias-Aware and Clinically Validated

Scrubs Co-Pilot is currently conducting **clinical evaluation studies with diverse providers** — including palliative care teams, family physicians, and psychologists — to ensure that its AI performs fairly across **genders, races, and cultural backgrounds**, with special attention to **Indigenous populations in Canada**. Early results show impressive parity in documentation quality and clinical accuracy, helping eliminate bias from the ground up.

Beyond Time Savings: Clarity, Auditability, Trust

While some competitors boast time savings, Scrubs Co-Pilot goes further: it **reduces cognitive load, enriches the clarity of notes, and ensures audit-proof documentation**. With time stamped citations and synced audio navigation, clinicians always have verifiable context for every entry — boosting trust without adding effort.

Privacy and Compliance First

Scrubs Co-Pilot is built from day one to comply with **HIPAA, PIPEDA, and PHIPA** regulations. Audio is securely encrypted and either deleted immediately or retained briefly (based on user preference), never used for training or model improvement. Clinicians retain full control over their data.

About Scrubs Co-Pilot

Scrubs Co-Pilot is a Toronto-based healthtech startup building AI-powered tools to eliminate clinical burnout and elevate patient care. With a focus on bias-resistance, medical-grade accuracy, and ambient ease of use, Scrubs Co-Pilot is redefining what's possible with AI in healthcare — starting with the humble medical note.
